

INTRODUCING THE MASTER IN LEARNING SCIENCE AND ENGINEERING

Design the future of educational technology by re-examining the goals of education and assessment and making innovative change.

Carnegie Mellon is now offering a new Master of Science degree for students with a background in psychology, education, computer science, design, information technology, or business who seek the knowledge, skills, and techniques to develop and evaluate programs in formal and informal educational settings including schools, workplaces, homes, and museums that involve both face-to-face and online interactions.

Graduates will gain depth in the following areas, among others:

- psychometric and educational data mining methods
- interaction design
- cognitive and social psychology principles
- design, implementation, and evaluation of educational interventions

Apply today for consideration in the Fall 2013 inaugural class.

Application Deadline
January 31, 2013
